

OUR OWN SITE GRADES **B**: SIX FIXES, ONE OF THEM SPEED.

A recorded audit of searchengineseer.com from 10 October 2026, before the rebuild, with AI-visibility counts from our own tracking.

B grade before the rebuild	93 mobile speed score	2.6 s mobile largest paint
6 fixes found	160 AI answers recorded	6 modules planned

OVERVIEW

B
grade for searchengine-seer.com
before the rebuild

93
mobile speed score, out of 100

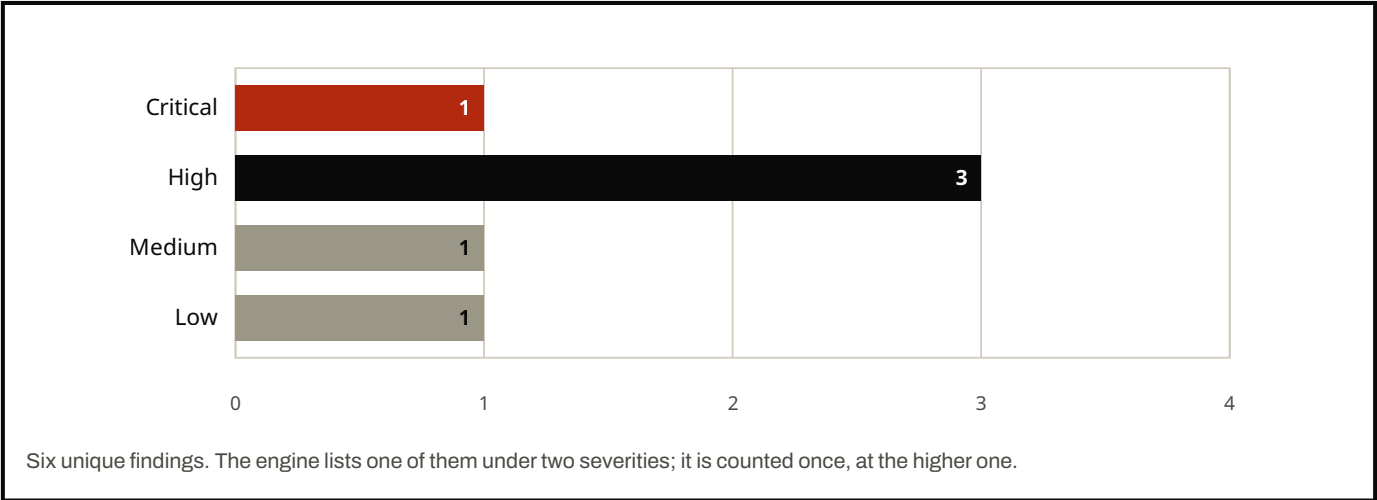

2.6 s
mobile largest paint; the line is 2.5 s

6
fixes found, one critical

160
AI answers recorded; none mentioned
the brand we tracked

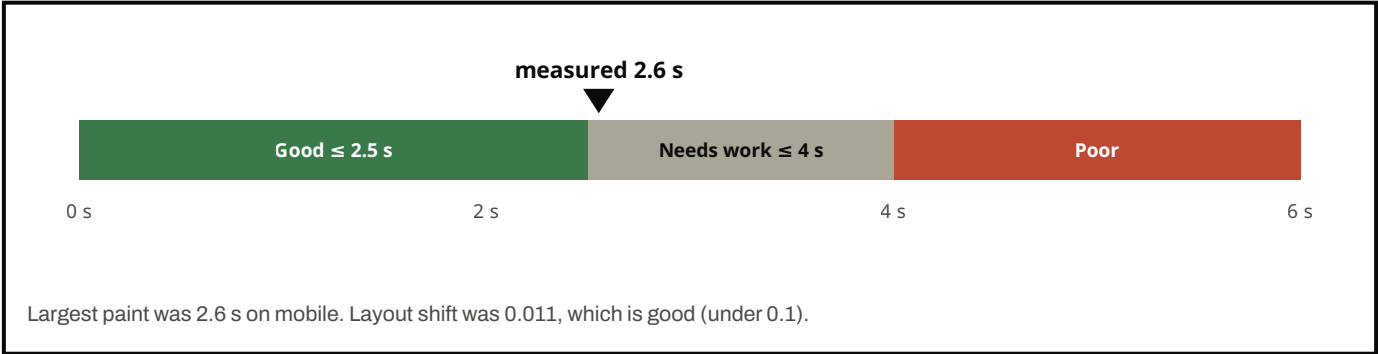

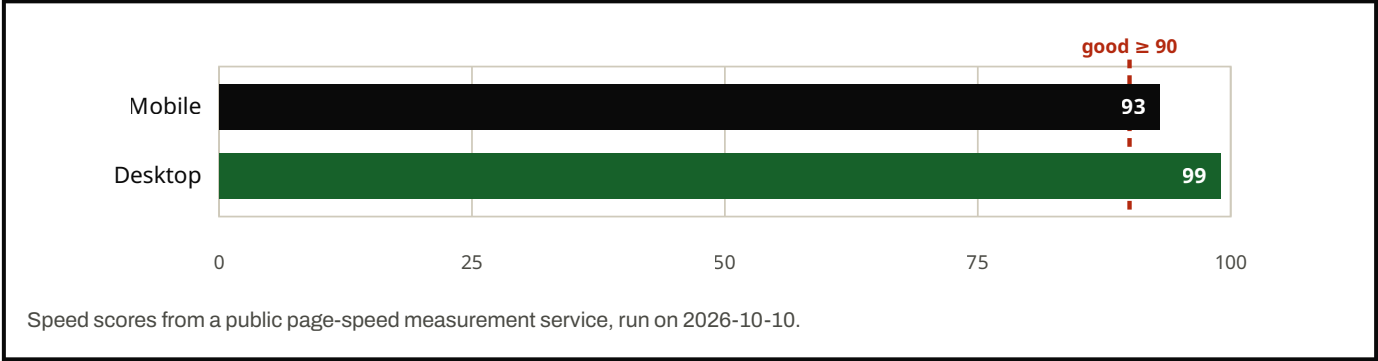

6
modules planned, not built

VERDICT. Good bones, one speed miss and three discoverability gaps: no canonical link, no social tags, no structured data. **Fix order:** speed, canonical link, structured data, social tags, sitemap, security headers. Each fix is traceable to the probe that found it on the Fix plan tab.

MEASURED ON 2026-10-10	SEARCHENGINESEER.COM (BEFORE REBUILD)		SPECTROSCIENCE.COM
Grade	B		B
Mobile speed score	93	unavailable (the measurement timed out)	
Desktop speed score	99	unavailable (the measurement timed out)	
Words on the page	1039	479	
Sitemap URLs	13	4	
Security headers present	2 of 5	4 of 5	
Findings: critical / high / medium / low	1 / 3 / 1 / 1		1 / 1 / 2 / 0

AI VISIBILITY

WHAT THIS SHOWS. One engine answered every time. The other three answered 47 of 339 times. Across 160 recorded answers the one brand we tracked was never mentioned, which is a true “not cited yet” result and not a failure of the check. The product shows engine availability next to every score for this reason.

ENGINE	ASKED	ANSWERED	UNAVAILABLE	MENTIONED THE BRAND
Search-grounded engine	113	113	0	0
Language-model engine 1	113	13	100	0
Language-model engine 2	113	15	98	0
Language-model engine 3	113	19	94	0
All engines	452	160	292	0

FIX PLAN

#	FINDING	SEVERITY	EVIDENCE	FIX	IN THIS RELEASE
1	Speed Mobile largest paint was 2.6 s, over the 2.5 s line	CRITICAL	pagespeed.lcp_ms = 2552	Self-host fonts, preload the two used above the fold, ship static pages with no third-party scripts.	Addressed in this build; a re-audit after go-live will confirm
2	Canonical link No canonical link on the page	HIGH	onpage.canonical = none	One canonical link per page.	Addressed: every page has one
3	Structured data No JSON-LD structured data	HIGH	onpage.schema_count = 0	Organization and WebSite markup, generated with our own generator.	Addressed: home page
4	Social tags No Open Graph tags	HIGH	onpage.og_tags = 0	Title, description, URL and image tags on every page.	Addressed: every page
5	Sitemap Sitemap listed 13 URLs, under the 20 the engine treats as healthy	MEDIUM	onpage.sitemap_url_count = 13	List every public page.	Addressed: 24 URLs listed, every public page
6	Security headers Only 2 of 5 headers present	LOW	onpage.security_headers_missing = X-Frame-Options, Content-Security-Policy, Referrer-Policy	Add the three headers at the server.	Addressed in the go-live server config

SOURCES AND LIMITS

ITEM	HOW IT WAS PRODUCED	COVERAGE
Audit engine	Run on 2026-10-10 against searchengine.seer.com and spectroscience.com with the production audit module and its service environment.	TLS, DNS, headers, on-page parse, page-speed measurement

ITEM	HOW IT WAS PRODUCED	COVERAGE
AI-visibility results	452 stored results, 57 passes, 2026-08-14 to 2026-10-09, one tracked brand.	Counts only; no engine answers are reproduced here
Structured data	Generated by the product's own generator on 2026-10-10.	Organization, WebSite
Case study numbers	Internal audit of 2026-08-21 and verification in production.	Linked report

LIMITS WE WANT YOU TO SEE

- The second site's page-speed measurement timed out, so its speed fields read unavailable. They were not estimated.
- Backlinks, search rankings and competitor data are not measured today; those fields read n/a wherever they would appear.
- The AI-visibility counts come from one tracked brand. They show engine availability and the shape of the evidence, not a market benchmark.
- The fixes listed as addressed are in this release; the proof is a re-audit of the live site, which runs after go-live.
- Scores and grades use proprietary weights; the checks and evidence behind each finding are shown.
